Friction Brake

Raising the Load:

Rotate the handwheel in a clockwise direction. If at any point you let go of the handwheel, the brake will automatically engage, locking the load in place.

Lowering the Load:

With a hand on the handle or by lightly applying pressure of your palm on the rim of the handwheel, gently ease back on the brake lever. This will release the hold of the brake allowing you to control the rate of descent. The brake will automatically re-engage when you let go of the brake lever.

Polyolefin Wheels

An excellent low cost caster wheel for applications with smooth floors. Polyolefin is a very hard plastic material that is both durable and allows for easy maneuverability. With steel roller bearings, these casters can be very efficient on clean, hard floor surfaces.

Benefits:

- Economical
- Simple & easy-to-use
- Capable of quicker lowering speeds
- Meets applicable ASME & OSHA requirements

*Only applies to models with 6" casters

LIFTS 500 LBS!

LoadLock Clutch Brake

Raising the Load:

Rotate the handwheel in a clockwise direction. When the handwheel is released, the weight of the load automatically engages the clutch pads to lock the load in place.

Lowering the Load:

Rotate the handwheel in a counter-clockwise direction. As you apply rotational force to the handwheel, the clutch pads release, allowing the load to be lowered. The load will only lower relative to the rate the handwheel is being rotated.

Transforma Rubber Wheels

Quiet and non-marking, the Transforma rubber wheel provides the premium rolling experience many applications require. The hard rubber compound offers a smooth, cushioned ride while rejecting debris and rolling over floor imperfections with ease.

*Only applies to models with 6" casters

Benefits:

- Straightforward and easy-to-use brake operation
- Rotated handwheel position
- Hard rubber caster wheels for smoother rollability
- Meets applicable ASME & OSHA requirements
- Option to be CSA or CE certified

Customized

LIFTS 500 LBS!

Your Application

Customize ANY standard Sky Hook model to fit your application! Choose height, reach, handwheel location, handwheel orientation, environment packages, base size, features and so much more!

Ergonomic By Design

Lowered Handwheel:

Designed and built to your exact requirements, this option brings the handwheel down to a more ergonomic height from the ground. With a handwheel height that is closer to 40-48" the user can enjoy reduced fatigue caused by repetition.

Ergonomic Push Handle:

When pushing a mobile Sky Hook over a long distance, a custom push handle can improve operator stance and leverage to reduce undue strain.

Unique Environments

Cleanroom Package:

Replaces debris causing components with cleanroom safe equivalents to reduce particle generation.

Anti-Static Package:

Performa conductive wheels w/ added stainless ESD drag cable to eliminate static build-up and discharge.
